### DETAILED ACTION

1. Applicant's election of Group I, claims 1-14 in the reply filed on 8/15/06 is acknowledged. Election was made **without** traverse in the reply filed on 8/15/06.
2. Claims 15-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/15/06.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 and 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Enzmann et al. (IDS reference filed 3/24/05). Enzmann et al. on page 986 discloses the co-cultivation of rabbit mature retinal organ culture (comprising all of the mature retinal cell types recited in the claims) with human choroidal melanoma cells (isolated from the ciliary body), meeting the limitations of the instant claims, given the definition of "ciliary body" as taught by the instant specification at page 6, lines 10-12.
5. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Tropepe et al. (IDS reference BM, filed 11/19/03). Tropepe et al. on page 2034 discloses that a single pigmented cell from the ciliary margin (PCM) can form sphere colonies which contain true retinal stem cells, mature retinal neuronal cells (expressing microtubule-associated protein 2), and various photoreceptor, Muller glia, and bipolar

cells, meeting the limitations of the instant claims, given the definition of "ciliary body" as taught by the instant specification at page 6, lines 10-12.

6. No claims are allowed.
